coffeebar

Mainline customer review

Recharging batteries
at Coffeebar

Coffeebar, in Jakarta has installed Mainline Power in its busy coffee shop to improve customer experience.

"Our main aim is to make every customer feel as comfortable and at home as possible during their visit. As a large percentage of our customers are people with smart-phones and laptops; by offering power to charge these devices we are giving the maximum level of service, in order for everyone to enjoy their Coffeebar experience to the fullest.

The Mainline system was an obvious solution for this purpose. We were impressed by its quick and easy installation, plus the fact that it fits in really well with our design concept."

Raymond Poh, Coffeebar Owner

"It's great to be offered easy access to power for our devices, with a cool and simple way to do it too. It's good to know that we are taken care of at Coffeebar."

Vincent Tedjakusuma, customer.

"As a freelancer I do a lot of my work remotely, mostly at bars and cafés. One problem I find is to get a seat near to a power socket. Since I spend most of my working day on my laptop, recharging is a must. Most of the time, seats next to power sockets are occupied and this prevents convenient access. I hate confinement so the Mainline Power concept really makes my day, I love it! I wish more cafes had it."

Nathalie Lim, customer.
